

OUR VISION STATEMENT

To build lasting long-term relationships with our customers and provide a service focused on their needs

To generate unique solutions to client's needs with a combination of technologies, environmental awareness, experience and market knowledge

To implement these solutions with highly effective and motivated teams, capable of establishing and sustaining long-term relationships with our customers

Committing to service excellence, coupled with unique industry knowledge and skills has enable us to further the economic well-being and quality of life of all our stakeholders

PROVIDING INNOVATIVE SOLUTIONS, QUALITY PRODUCTS & ENHANCED VALUE

30 YEARS OF LOCAL EXPERIENCE

Comar Plant Design & Manufacturing, was founded in 1987 and has subsequently been acquired by B&E International, in 2012.

Comar designs and manufactures complete static and mobile batch and continuous mix asphalt plants. In addition to this, Comar supplies numerous ancillary products and services within the asphalt industry, throughout Africa. These typically comprise aggregate feed systems, recycling facilities, emission control systems and hot storage facilities. Comar also manufactures and supplies bitumen storage tanks, bitumen drum heating and decanting facilities, base coarse mixers, brooms, chip spreaders, etc.

Comar's highly motivated R&D team constantly strives to develop and improve asphalt technologies, remaining abreast of the ever changing global market, as well as client's requirements. Current R&D focus areas include optimised energy consumption and efficiencies, emissions control and carbon footprint optimisation, RAP ("Recycled Asphalt Pavement") feed system redesign and improvements, heat transfer models and mobile plant design optimisation.

In addition to the supply of new equipment, Comar also focuses on the optimisation and performance improvement of existing asphalt plants.

WHAT WE DO BEST

- Comar Plant Design & Manufacturing has the expertise to conceptualise, design and manufacture complete static and mobile asphalt plants, ranging from 4 - 6 tph ("tonnes per hour") through to large 250 tph asphalt plants.
- Comar Plant Design & Manufacturing boasts the design of mobile and static asphalt plants running successfully with the addition of up to 40% RAP material.
- Comar Plant Design & Manufacturing's air filtration systems meet the 2015 legislation of 50 mg/m³ and we constantly strive to provide a greener environment and subsequent reduced carbon footprint.
- Comar Plant Design & Manufacturing provides our customers with tailor-made, cutting-edge solutions to best suite their individual needs.

OUR KEY SERVICES INCLUDE

- Asphalt plant optimisation, energy audits and consulting
- Design and manufacturing of mobile and static continuous mix asphalt plants
- Design and manufacturing of mobile and static batch mix asphalt plants
- Design and manufacturing of mobile and static base course plants
- Design and manufacturing of bitumen decanters and all bitumen related equipment
- Design and manufacturing of purpose built equipment for the asphalt industry including, chip spreaders, sprayers, mobile storage tanks, road sweepers and drying plants
- Design and manufacturing of small cold mix asphalt plants, with bagging facilities for this product
- Retrofitting, plant upgrades and fitting plants with rap handling capabilities
